

Appln. No. 10/689,393

Attorney Docket No. 10541-1881

I. Amendments to the Specification

Please replace paragraph [0027] on page 8 with the following amended paragraph:

[0027] In yet another embodiment, the cam 30 may be axially adjustable in a direction normal to the rail 16. In this embodiment, the cam 30 would be biased towards the rail preferably by a spring. Alternatively, the cam could be biased away from the rail 16, and a latch 52 (FIG. 6) would fix the cam 30 in a locked position having the engagement surface 38 pressed against the engagement side 42 of the rail 16. The cam could thus be sized as a button to be pressed by a user with a single finger. Such push button, spring-loaded latches are well known in the art.
